

# SOME PROPERTIES OF GENERATING SYSTEMS OF SETS AND SEQUENCES

RAUNI LILLEMETS

The notions of a generating system of sets and a generating system of sequences were introduced in 1980 by Irmtraud Stephani in [1].

We try to further understand the underlying structure and connections between those two notions. We also introduce a way to construct a wide range of generating systems of sets provided we are given a class of sequences that satisfy certain conditions.

The talk is based on author's master thesis supervised by Eve Oja.

The research was partially supported by Estonian Science Foundation Grant 8976.
